

Payment Data Management Services

Secure Storage • Hosted Payment Acceptance

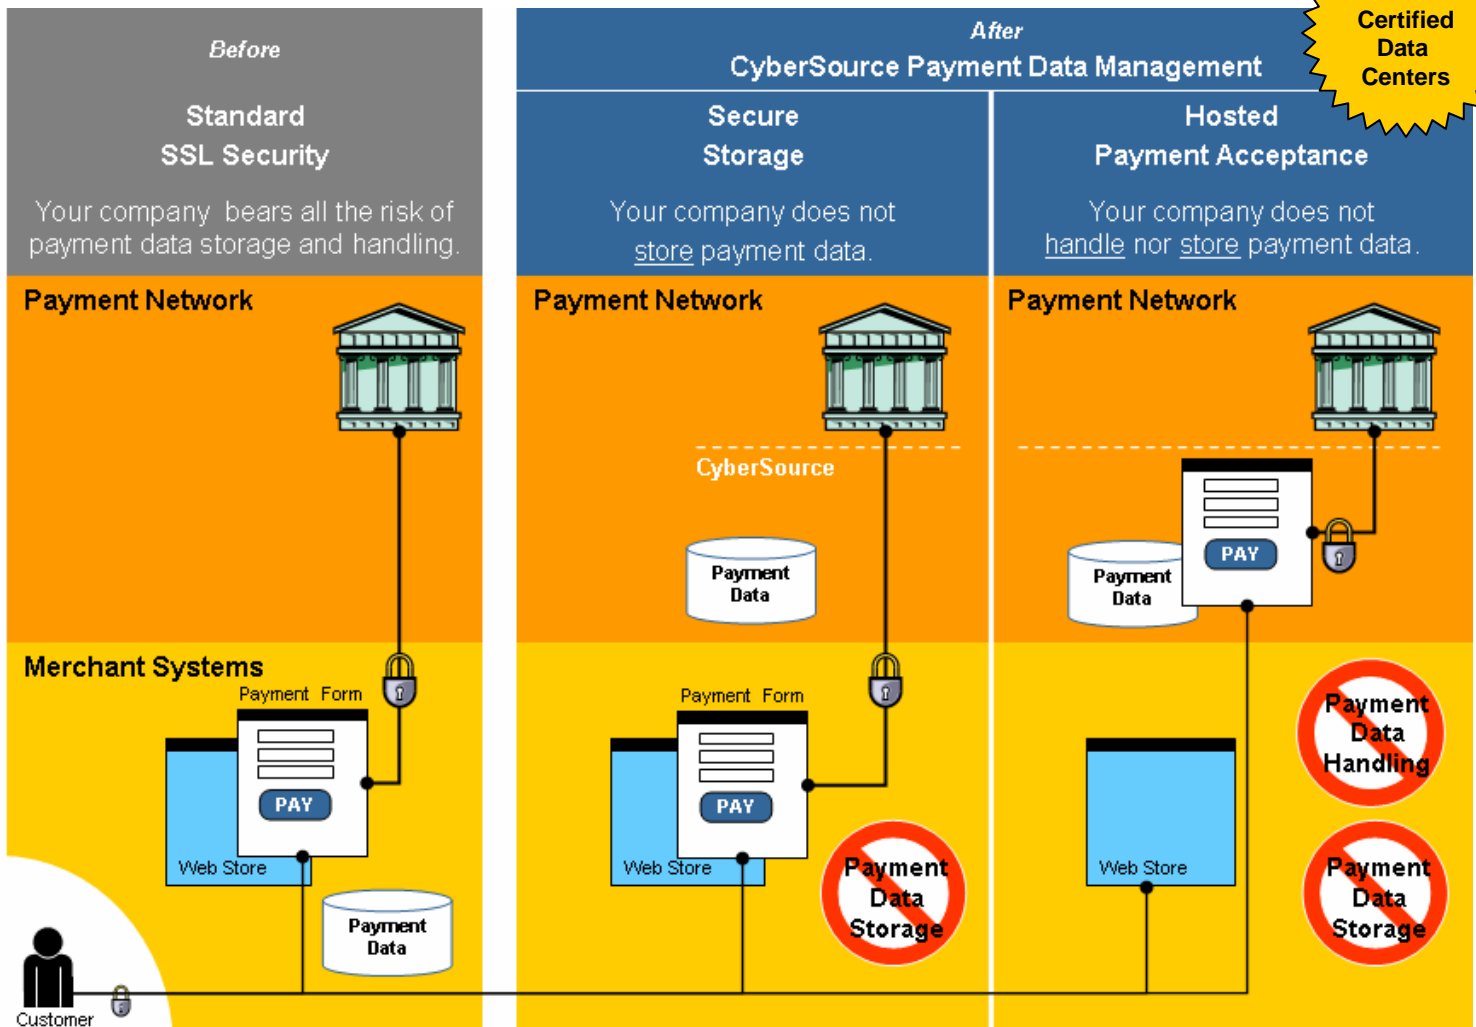

Instantly Boosts Payment Security

by moving sensitive payment information off your systems to the payment network

Now you can accept and process payments without the risk of storing or handling sensitive consumer payment data. CyberSource manages the data on your behalf in our secure data centers. Service works with any payment system or processor. See back panel for details.

- Process payments without storing or handling sensitive account data
- Achieve payment security (PCI) certification faster and easier
- Increase consumer trust and reduce brand risk
- Protect your company from costly consumer notification requirements

CyberSource®
the power of payment

Secure Storage

Lets you store payment data at CyberSource instead of on your own systems. Payment information is captured via your existing order page and transmitted to CyberSource. CyberSource stores the data on your behalf in our secure, PCI-certified, data centers and returns a “payment token” to your system. This token is used to initiate subsequent payment actions on that account. Data is easily uploaded and retrieved using our API or batch loading processes. Secure Storage can be implemented with or without Hosted Payment Acceptance.

Store Nearly Any Type of Sensitive Transaction Data

Store and retrieve payment information and other sensitive transaction data.

Supports All Payment Actions and Checkout Models

Secure Storage protects you from risk but doesn't restrict payment flexibility or custom interaction with your systems. Supported payment actions and checkout models include:

- One-time transaction
- Recurring billing, installment billing
- One-click buy
- Settlement/partial settlement
- Re-authorization
- Credit/partial credit
- More...

Works With Any System or Processor

Even if you don't process payments with CyberSource you can still use CyberSource Secure Storage to safely store your payment data and transact with your chosen processor via use of the payment token. Works with all processors and payment systems. Contact a CyberSource representative for details.

Hosted Payment Acceptance

Allows you to accept payments without ever handling sensitive transaction data. You simply create a secure link from your checkout process to a hosted payment page/form. All payment data is captured, processed and stored within CyberSource's security-certified processing network. Supports most payment types worldwide and can be configured per your specifications. Works with temporary and long term Secure Storage capabilities.

Choose Your Branding Strategy

You can configure your page to reflect the look and feel of your site; or, you can make it visibly evident to your customers that they are transacting payment directly with the processing network via a CyberSource branded page.
