Cybersource for SAP Digital Payments Add-On

Simple, secure processing of digital payments in the cloud

Challenge

Companies that do business globally need to be able to offer digital payments to their customers around the world.

Solution

SAP Digital Payments Add-On (DPA) is a stand-alone cloud-based integration that enables payments processing within any SAP platform. Through SAP DPA, you can connect between applications and Cybersource, from the word 'go'. So you can easily offer your customers the flexibility to pay the way they choose as soon as you're up and running. DPA makes payments complexity a thing of the past, connecting to Cybersource with no implementation efforts. This means it's never been easier to accept payment from customers anywhere in the world.

A Visa Solution

SAP® Certified
Integration with SAP Applications

How it works

SAP DPA runs in the SAP Cloud Platform using APIs. This means you can connect painlessly to multiple applications, saving you money and hassle from having to maintain multiple point-to-point connections. You can hit the ground running, with integration straight out of the box into various SAP and non-SAP order/sale-to-cash processes (B2B, B2C, online shops, etc.). Cybersource makes the choice easy, with a ready to go de-coupled integration to the SAP DPA. We designed it this way so you can connect SAP and non-SAP consumer applications alongside the Cybersource payment management platform and be confident that end-to-end processing of digital payments is secure.

Built on a global, secure Visa infrastructure, Cybersource's payment management platform gives you the global reach you need, whilst helping to take care of the risk and associated PCI compliance.

Cybersource's Payment Service for SAP Digital Payments Add-On was designed to deliver end-to-end digital payments processing simply, safely and securely.

SECURE

- Customer payment data and communications is encrypted.
- Card data is tokenized to protect online payments and keep customers' money safe.
- Authenticate customers and shield their accounts from fraudsters and support Europe's PSD2 SCA mandate.
- Keep customer payment data off your network and locked away in secure Visa data centers.

TAILORED

- Let your customers pay their way.
- Repeat or single purchase, you're covered no matter the situation.
- Boost conversion by accepting payments from customers around the globe.

FRICTIONLESS

- Accept payments across channels anytime, anywhere and support omnichannel initiatives.
- Install and configure the solution to fit you, with support from us.
- Designed as a SaaS solution, created to be deployed on the SAP platform effortlessly.
- Compliance tested against real-life scenarios, you can trust our solution to function correctly.
- Localized to support local currencies and meet the demands of global customers.
